ABOUT ME

Designing since 2017 (over 9 years), I am a user-centric, empathy driven product designer. My approach focuses on holistic thinking, prioritizing data over assumptions, and consistently delivering working designs that exceed user expectations. Engage in experiencing new design trends by follow them. I pride myself on reliable communication and being easy to work with.

WORK EXPERIENCE

Senior UX designer | DXC Technology, Bengaluru | 2019 - 2023

Projects

- **Digital habitat (Company's internal application)** - Internal resource management tool to manage all new joiners with their trainings, projects and miscellaneous required tasks, solid search engine within tool, robust dashboard, multiusers, pin items for later, a complete portal including offering & solutions.
- **Softbank (IOT) SB Takeshiba smart city** - Led UX design for a Smart City proposal for one of Japan's largest companies, creating wireframes and high-fidelity designs tailored to client needs. The solution included features like child safety, asset and fleet tracking, social monitoring, and real-time dashboards with alerts for events such as geo-fence violations and overcrowding. Also supported strategic presentation development to highlight key differentiators.
- **Uniper** - Distributing jobs & on boarding portal.
- **DXC Insurance** - UX research and UI, Conducted research and documentation of reusable UI components and design tokens, contributing to the Halstack Design System. Ensured consistent usage across multiple applications by aligning both design and development teams. The system was built to support future scalability, with components managed and updated collaboratively via GitHub for seamless integration.
- **Zurich UK / North America** - Revamped and redesigned legacy software with improved search, dashboard UI, and workflow experiences for multiple user use cases. Enhanced internal system usability through modern UX solutions and streamlined navigation.
- **Kaiser (Product design)** - Conducted UX research and redesigned a job management portal to streamline project distribution, scheduling, and automation workflows. Implemented client-requested features, performed end-to-end testing, and collaborated with cross-functional teams to improve operational efficiency by 30%.
- **Philips (Web app)** - Designed and developed high-performance web pages and dashboards for Philips management and tracking systems. Improved usability and operational efficiency by 30% through responsive design, automation, and close collaboration with stakeholders and development teams.
- **Agentic Task Management System** - Tracking Team Tasks & Translation Dashboard
- **Emirates airways** - Redesigned complex IT interfaces to improve usability and support Emirates' shift toward AI-driven systems and cloud platforms. Focused on simplifying workflows, enhancing digital experiences, and accelerating time-to-market for new services and products.
- **Bayernwerk** - UX design and AI use cases, transformed AI MVPs into user-friendly, reliable, and scalable solutions through DXC's MLOps, enhancing efficiency and saving thousands of euros annually.
- **Bajaj Auto (Product Design-RFID Tagging)** - Getting requirement to user interview to delivering the final design with Style guide.
- **Hero MotoCorp (Product Design)** - Employee Leave Mobile Application. Getting requirement, UX & Visual Designing for SAP Tool

- **MOSIP (Product Design)** - Creating unique identification number for the individuals. From gathering requirements to UX and working on the designs.
